

# Interactive Museum System

## If you want...

- *To experience an original and interactive tour.*
- *A technological tool that allows you to enrich your collection*

## Discover the NoFrontiers Museum with Urbano Creativo

We design and realize for your museum a technological infrastructure able to connect your collection with external objects of art, art galleries and exhibitions. This system can connect museums of the same city or all over the world. "Interactive museum" can make the tour an unique experience, every time different and original.

Thanks to our systems the user can receive information, additional contents and in-depth examinations about collections, or you can admire objects of art even though they are in loan or not accessible. And, when your tour is ended, it is possible to repeat the experience from outside as well, thanks to the interaction between our system and mobile phones or personal digital assistants.

### How?

- Through analysis of museum context and exhibitions.
- Examination of the existing connections with others museums, objects of art and collections and suggestion of unused interactions.
- Planning of the most update hardware infrastructure ( infopoint, electronic display window, totem).
- Creation of one specific software for museum information.
- Production of graphic interface.
- Arrangement of communication system with mobile phones and personal digital assistants.
- Choice and/or production of contents ( texts, audios, videos, photos etc.)
- Training Course to teach how to update contents.
